This Ferrari restoration intake manifold was powder coated in custom wrinkle red and silver.

COLOURFAST CUSTOM COATING CONCORD, ONTARIO

These photos show the "aged effect" with satin clear powder for home décor and retail application.

A custom wheel for Porsche Canada was powder coated in gloss black with gunmetal and fire red inset.

For more than 20 years, custom powder coating shop Colourfast has been dressing metal and specializing in high-profile specialty coatings and applications. Led by president Joseph Manzoli, the company has developed from a small job shop to an internationally renowned custom coating specialist with over 1,000 powder coating colors and finishes.

Recently, Colourfast has developed and focused on exotic, proprietary finishes where powder coatings are used to protect various versions of metals which are given effects using a wide range of different chemicals. Pictured are some recent projects worked on in the shop.

For more information on this custom coater's capabilities, call Colourfast at 905/660-3454 or visit www.colourfastcorp.com.

SPOTLIGHT

Keystone Coating began in 1986 as a way to professionally coat the steel products manufactured for farm and commercial use by other Paul B. Zimmerman companies. Over time, the company's focus on improvement and exceeding customer expectations has led to the production of an environmentally safe, industry-leading powder coating system for the agricultural, medical, retail, and architectural industries. At the heart of this system is a proprietary 8-stage pretreatment process that removes the maximum amount of impurities and boasts a final freshwater rinse that produces the highest quality of adhesion. Keystone Coating believes that this innovative 8-stage pretreatment system affords them a unique advantage in creating long-term adhesion.

Plus, according to Ervin Miller, sales manager and powder purchasing director, the company has just completed the construction of a brand new small parts coating line that will run alongside its current large parts line. Shown here are some recent powder coating projects completed by Keystone Coating.

KEYSTONE COATING LITITZ, PENNSYLVANIA

This dining arrangement was powder coated for Richard Shultz Design.

Keystone powder coated the structural steel used on this solar parking canopy designed and built by Solaire Generation.

The company powder coated this bench for a "poetry paths project" at the Lancaster Public Library in Lancaster, Pa.

EXTREME POWDER COATING BLOOMING PRAIRIE, MINNESOTA

The employee lounge cabinets and table brighten up the room with Tiger Drylac Bengal Red powder coating.

Extrême Custom Powder Coating was established in December 2000 after CEO Greg Peterson discovered the need for powder coating services in southeastern Minnesota. Greg fired up his company in the small rural community of Blooming Prairie. Back then, his shop was small but his dreams were big!

Over the past decade, Greg has significantly grown his company and now employs ten people at a recently built 12,500-square-foot facility. Not only that, but the company will be adding a 10,000-square-foot warehouse for sandblasting and storage in October 2013.

Extrême coats almost anything — from heavy industrial equipment to unique custom jobs, there is no project too big or small. This shop provides Minnesota-nice service matched by top-quality finishes.

Various custom powder coated pieces are displayed here, including a bench coated with Cardinal RD-01; blue filing cabinet and lawn chair coated with Cardinal BL-01; silver valve cover coated with Tiger Drylac Bengal Silver; orange valve cover coated with Cardinal OG-26; pink breast cancer awareness signage coated with Tiger Drylac 49/30430 Bright Pink on White base coat 49/11000; and a black air cleaner coated with Cardinal BK-176 Wrinkle Black.

This is the shop's 1965 Chevrolet C-10 Longbox show truck. Everything has been powder coated — the wheels, frame, all suspension, engine, engine components, cab, firewall, wheel wells, rear end, bumpers, dash — anything you can coat on it, they did! This truck is affectionately called "NO PAINT."

This wheel was powder coated with Tiger Drylac Bengal Black.

John Deere mower decking pieces are shown coated in Cardinal YL-01 and Diamond Vogel Tractor Green ET-6390.

These Harley Davidson engine components are shot in Cardinal BK-176 Wrinkle Black.

For more information on this custom coater's capabilities, call Extreme at 507/583-7448 or toll-free at 866/492-5597 or visit www.extremepowdercoating.net.

This McCulloch super charger is on display at Speedway Motors in Lincoln, Nebr. There are four custom colors, which included lots of masking and strategic curing for this project.

ACME FINISHING COMPANY ELK GROVE VILLAGE, ILLINOIS

The company powder coated this bike and components with Halo coatings. Halo's many benefits include increased nighttime visibility, high durability with enhanced corrosion protection, retroreflection of 98 percent of all solar UV, and 100 percent green technology.

Family owned since 1933, Acme Finishing Company uses state-of-the-art finishing processes providing paint, powder coating, screen printing, assembly, and packaging solutions for all market segments. The company provides precision processes, limitless quantity capabilities, unsurpassed ISO 9001-2008 quality program, and unique problem solving skills.

Acme Finishing's 112,000-square-foot building located in Elk Grove Village, Ill., makes it one of the largest job shops in the Midwest. In fact, the company has the ability to process more than 400,000 parts per day! Not only that, but it also boasts a management staff with a combined 145 years in the finishing industry.

As the only Halo Retroreflective coater licensee in the central US, Acme Finishing uses Halo coatings to protect people and objects with over 1,000 feet of bright, incandescent, and life-saving visibility. Plus, according to Joe Laubenthal, director of sales and marketing, the company is the Midwest licensee for the application of Decoral powder wood grain and decorative metal finishes.

These two photos show the company's Decoral powder coated wood grain and decorative metal finish capabilities. Coatable surfaces include aluminum, glass, plastic, iron, or ceramic.

ABITL FINISHING ✧ TULSA, OKLAHOMA

As part of the revitalization of downtown Tulsa, the “Boulder Bridge” is shown backlit with ever-changing colored lights. The railings with decorative cutouts were shot using AKZO NOBEL’s 30-7452 Medium Gloss Black.

Established in 2000, ABITL Finishing has redefined what can now be powder coated with a newly installed 80-foot batch powder coating booth and 80-foot curing oven. This 80-foot line coupled with another 30-foot batch line and an 1,800-foot automated line with seven-stage wash system offers the ultimate in flexibility for custom powder coating.

ABITL uses thermosetting powder coatings to coat everything from small to very large scale, heavy to light, and simple to complex applications with endless color and texture options. Bob O’Reilly, director of operations, has sent photos to highlight two of the shop’s recent projects -- the Boulder Bridge and the Route 66 Bridge.

This Route 66 photo captures part of the “Route 66 Bridge” in downtown Tulsa. The railings were shot using IFS’s PLSF 30009 Moss Green.
